

Spring REST using Spring Boot 3 Assignment

Spring Core – Load Country from Spring Configuration XML

Objective

The objective of this assignment is to define a SimpleDateFormat object as a Spring bean in an XML configuration file and retrieve it using the Spring ApplicationContext. This avoids creating the same date formatter repeatedly in different parts of the application.

date-format.xml

```
<?xml version="1.0" encoding="UTF-8"?>

<beans xmlns="http://www.springframework.org/schema/beans"
       xmlns:xsi="http://www.w3.org/2001/XMLSchema-instance"
       xsi:schemaLocation="http://www.springframework.org/schema/beans
       https://www.springframework.org/schema/beans/spring-beans.xsd">

    <bean id="dateFormat" class="java.text.SimpleDateFormat">
        <constructor-arg value="dd/MM/yyyy" />
    </bean>

</beans>
```

SpringLearnApplication.java

```
package com.cognizant.springlearn;

import java.text.ParseException;
import java.text.SimpleDateFormat;
import java.util.Date;
import org.springframework.boot.SpringApplication;
import org.springframework.boot.autoconfigure.SpringBootApplication;
import org.springframework.context.ApplicationContext;
import org.springframework.context.support.ClassPathXmlApplicationContext;

@SpringBootApplication

public class SpringLearnApplication {

    public static void main(String[] args) {
```

```

SpringApplication.run(SpringLearnApplication.class, args);

displayDate();
}

public static void displayDate() {

    ApplicationContext context =

        new ClassPathXmlApplicationContext("date-format.xml");

    SimpleDateFormat format =

        context.getBean("dateFormat", SimpleDateFormat.class);

    try {

        Date date = format.parse("31/12/2018");

        System.out.println(date);

    } catch (ParseException e) {

        e.printStackTrace();

    }

}

}

```

Output:

:: Spring Boot :: (v3.4.6)

```
