

Aim:

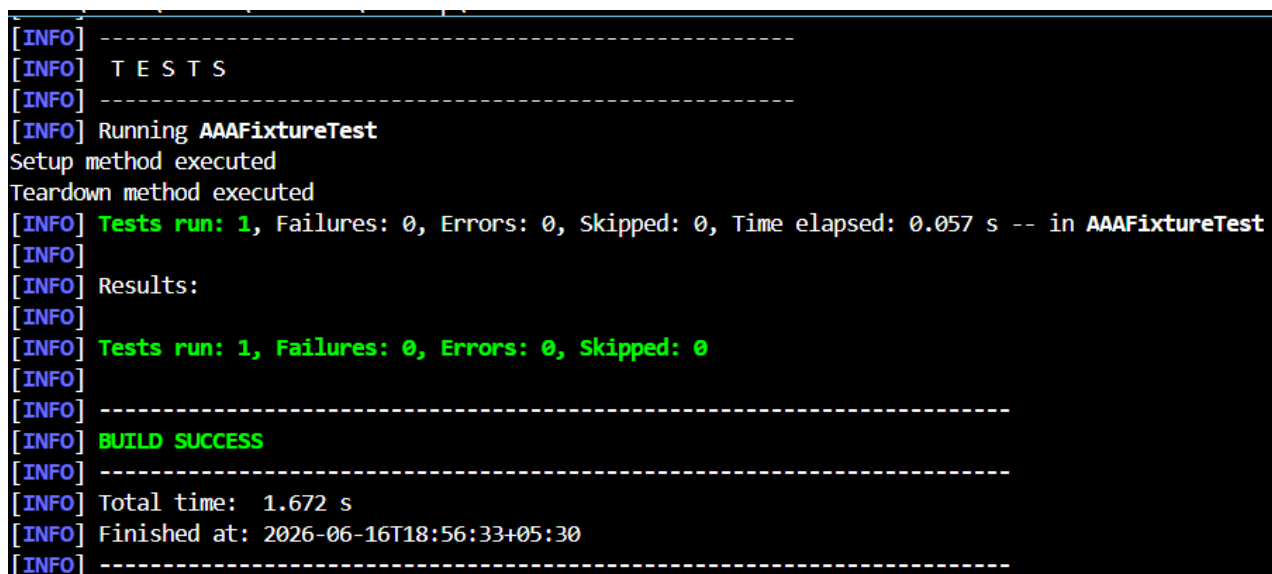

To organize JUnit test cases using the Arrange-Act-Assert (AAA) pattern and implement setup and teardown methods using JUnit annotations.

Scenario:

To organize your tests using the Arrange-Act-Assert (AAA) pattern and use setup and teardown methods.

Solution Code:

```
import static org.junit.jupiter.api.Assertions.*;
import org.junit.jupiter.api.AfterEach;
import org.junit.jupiter.api.BeforeEach;
import org.junit.jupiter.api.Test;
public class AAATest {
    private int number;
    @BeforeEach
    void setUp() {
        System.out.println("Setup method executed");
        number = 10;
    }
    @AfterEach
    void tearDown() {
        System.out.println("Teardown method executed");
    }
    @Test
    void testAddition() {
        // Arrange
        int value = number;
        // Act
        int result = value + 5;
        // Assert
        assertEquals(15, result);
    }
}
```

```
