

Logger.java:

```
package SingletonPatternExample;

public class Logger {
    private static Logger instance=null;
    private Logger(){
        System.out.println("Singleton constructor called! New object created.");
    }
    public static Logger getInstance(){
        if(instance==null){
            instance=new Logger();
        }
        return instance;
    }
    public void log(String message) {
        System.out.println("[LOG] " + message);
    }
}
```

LoggerTest.java:

```
package SingletonPatternExample;

public class LoggerTest {
    public static void main(String[] args) {

        Logger ob1 = Logger.getInstance();
        Logger ob2 = Logger.getInstance();

        ob1.log("Application started.");
        ob2.log("User logged in.");

        if (ob1 == ob2) {
            System.out.println("Same instance - Singleton pattern works correctly.");
        } else {
            System.out.println("Different instances - Singleton pattern failed.");
        }
    }
}
```
